Regular programs throughout the year

SkyNights Program: Tucson's BEST StarGazing Destination!
Largest public viewing telescope in the Southwest

This program is a unique awe-inspiring opportunity that lets you peer beyond the blue horizons of our southwestern skies and explore the astronomical wonders of the Universe from the summit of Mt. Lemmon Tucson's highest peak (9200 feet) and scenic sky island. This five hour program guides you through navigating the night sky with binoculars and sky charts, to viewing spectacular planets, galaxies, and nebulae with our Schulman 32-inch telescope. This telescope is the largest dedicated public observing telescope in Arizona and offers a captivating access to the Universe.

The University of Arizona's Mt Lemmon SkyCenter runs programs for science enthusiasts young and old throughout the year. Sponsored by the UA's College of Science and Steward Observatory, the SkyCenter provides world class science learning experiences that will enrich the lives of all who attend. Anyone who is interested or even just curious about what lies beyond the horizons will enjoy this program.

Experience: Earth and Sky

You begin in the subtropical Sonoran Desert, drive up the scenic Catalina Highway through six distinct ecosystems. At the end of the road lies the summit of Mt Lemmon and the SkyCenter where your astronomical experience begins.

Observe the Universe

Take a 9,200 ft sky island; add a 32-inch telescope and the sky comes alive! As twilight turns to night, you begin your pursuit of the wonders that lie within and beyond our Galaxy.

Program

Our StarGazing programs are conducted most nights of the year, and are weather dependent.

This five-hour program includes a light meal and access to the universe rarely experienced by most individuals. It is a comfortable setting, easy to understand and fun for all ages! Starting times vary throughout the year. Purchase your tickets today for this memorable MUST-SEE experience!
